

Shalom,

I am going to clear up the confusion surrounding Yahweh's calendar. So, study the below diagrams carefully.

Note: Railway time is used. The earth and the Moon are revolving in a circular orbit according to Job 26:7, Jer. 31:35, 33:19-26; John 11:9.

Thanks to Google/NASA. <https://www.youtube.com/watch?v=Cz0ghFtwKoE>, <https://www.youtube.com/watch?v=2y2LBHltvnE>

I want to make it clear that I am determined to unravel the mystery behind the 49 years mentioned in Yahweh's Book in Leviticus 25th Chapter 8th to 9th verse. According to Yahweh's command, we are required to count 7 times 7 years, which totals to 49 Years, in order to celebrate the Jubilee Year. I have personally counted the 49 years and hope that this information will help to shed some light on this important aspect of Yahweh's calendar. I've been working hard on these calculations for 31 years, and I'm grateful to Yahweh for inspiring me every step of the way. Based on the principle of Yahweh's Calendar offers accurate measures for various aspects of time such as nights, daytimes, Moon phases, seasons, New Years, Extra Months, Tithe Years, Sabbatical Years, Jubilee Years, hours, minutes, and seconds. I will clear up the confusion behind the crescent first.

These are the Conditions to determine the beginning of Yahweh's Synodic Month (YSM):

(1). To determine the beginning of Yahweh's Synodic Month, it is recommended to celebrate the 1st day of Yahweh's Synodic Month from 6 PM on the previous Roman date to 6 PM on the next Roman date if Yahweh's Synodic Month begins or ends between zero hours and 9 hours. Please note that the Age of the Crescent should be LESS THAN OR EQUAL TO 18 HOURS at 6 PM of the next Roman date in this case. So, the Crescent should be visible in Israel after 6 PM of the

next Roman date if there are no clouds, no humidity in the air and no brightness in the sky. The Crescent will be visible always on the 2nd in Israel in this case. Note this and read Mal. 1:11, 14; Rom. 2:25-29; Gal.3:27-29; Eph. 1:1-12.

(2). Alternatively, you can also celebrate it (1st day of Yahweh's Synodic Month) from 6 PM on a similar Roman date to 6 PM on the next Roman date if Yahweh's Synodic Month begins or ends between 9 hours and 12 hours. Please note that the Age of the Crescent should be LESS THAN OR EQUAL TO 9 HOURS at 6 PM of a similar Roman date in this case. So, the Crescent will be visible in Israel after 6 PM of a similar Roman date if there are no clouds, no humidity in the air and no brightness in the sky. Please note this point. Read 1 Cor. 14:26-33.

(3). Alternatively, you can also celebrate it (1st day of Yahweh's Synodic Month) from 6 PM on a similar Roman date to 6 PM on the next Roman date if Yahweh's Synodic Month begins or ends between 12 hours and 14 hours. Please note that the Age of the Crescent might be LESS THAN OR EQUAL TO 6 HOURS at 6 PM of a similar Roman date in this case. So, the Crescent may be or may not be visible in Israel after 6 PM of a similar Roman date if there are no clouds, no humidity in the air and no brightness in the sky. Please note this point.

(4). Alternatively, you can also celebrate it (1st day of Yahweh's Synodic Month) from 6 PM on a similar Roman date to 6 PM on the next Roman date if Yahweh's Synodic Month begins or ends between 14 hours and 18 hours. Please note that the Age of the Crescent might be LESS THAN OR EQUAL TO 4 HOURS at 6 PM of a similar Roman date in this case. So, the Crescent may be or may not be visible in Israel after 6 PM of a similar Roman date if there are no clouds, no humidity in the air and no brightness in the sky. Most probably the Crescent might be visible on the 2nd day. Please note this point

(5). Alternatively, you can also celebrate it (1st day of Yahweh's Synodic Month) from 6 PM on a similar Roman date to 6 PM on the next Roman date if Yahweh's Synodic Month begins or ends between 18 hours and 24 hours. Please note that the Age of the Crescent might be LESS THAN OR EQUAL TO 24 HOURS at 6 PM of next Roman date in this case. So, the Crescent should be visible in Israel at 6 PM of next Roman date if there are no clouds, no humidity in the air and no brightness in the sky. The Crescent will be visible always on the 2nd in Israel in this case. Please note this point.

It is important to follow these conditions to ensure that the celebration of the beginning of Yahweh's Synodic Month is accurate and in accordance with the proofs.

Please note that the Sacrifices of the New Month should be burned on the Brazen Altar along with the daily sacrifices (Numbers 28:11-15). Please read Nehemiah 8:1-12; Acts 2:14-21; Mark 15:25; Numbers 28:11-15; Exodus 12:7-10; Deut. 16:7; Luke 22:14-23; John 13:1-30. That is why Israelis gathered in the Appointed times of Yahweh from 6 PM to 10 PM and 8 AM to 12 AM.

Yahweh's principle or Yahweh's formula or 49 Years is derived from the fact that the Earth revolves around the Sun 49 times while the Moon revolves around the Earth 606 times in 49 years, making it a reliable way to measure time.

It's believed that Yahweh had a plan for mankind, which is why the Universe was created according to a 7-day Weekly Cycle. According to some religious texts, Yahweh created man in His image on February 26th, 4234 BCE. It's also believed that the Sun, Moon, and stars were created by Yahweh at the end of the 3rd day of the very first Week, specifically at 6 PM on February 23rd, 4234 BCE at 35° East Longitude Jerusalem. If you're interested, you can read more about this in Genesis 1st and 2nd chapters and Matthew 5th chapter 35th verse. Please study from 1st to 4th page under Jewish History on www.yhwhcalendar49.com.

To understand Yahweh's calendar formula, you can follow these instructions: According to this formula, 49 years are equivalent to 49 Luni Solar Years, 49 Tropical Years, 49-Year Luni Solar Cycle, 49-Year Tropical Cycle, 606 Yahweh's Synodic Months, 588 Yahweh's Tropical Months, 17,896 nights, 17,896 daytimes, and 17,896 days, which remains

constant forever. You can learn more about this by referring to Jeremiah 33rd chapter, verses 19-26, and 32nd chapter, verses 26-27, as well as John 11th chapter, verse 9. For the proof, please visit our website.

At the Equator, each Yahweh's day takes 86,400 seconds. This is Constant forever according to Jer. 33:19-26.

At the Equator, each Yahweh's Synodic Month or YSM is calculated by dividing the days completed per 49 Luni Solar years by the Yahweh's Synodic Months completed per 49 Luni Solar years. So, Yahweh's Synodic Month or YSM = 29.53135314 days = 29 days, 12 hours, 45 minutes, and 8.91088972 seconds, which remains constant forever according to Jeremiah 33th Chapter 19th verse to 26th verse. This YSM gives accurate Phases of the Moon and Seasons because Yahweh determined this Formula and Principle.

At the Equator, each Yahweh's Tropical Year or YTY is calculated by dividing the days completed per 49 Tropical Years by 49 Yahweh's Tropical years. So, Yahweh's Tropical Year or YTY = 365.2244898 days = 365 days, 5 hours, 23 minutes, and 15.9183744 seconds, which remains constant forever according to Jeremiah 33:19-26. This YTY only gives accurate Seasons forever because Yahweh determined this Formula and Principle. So, the Sun gives Seasons and the Moon also gives seasons, and you can read more about this in Psalms 81:1-5 and 104:19. Yahweh is controlling the Universe! For the proof, please study under Yahweh's Clock, Jewish History and Challenge on our website.

This proved that the 49 Years = 49 – Year Luni Solar Cycle = 49 – Year Tropical Cycle = 606 Synodic Months = 588 Tropical Months = 17,896 days. Yahweh is controlling the Universe that is why the length of Yahweh's Day, Yahweh's Synodic Month, and Yahweh's Tropical Year are constant forever.

Therefore, it is wise to trust in Yahweh's principles and formulas rather than the words of astronomers. In the 24th chapter of Matthew, verses 35-36, it is also noted that heaven and earth may pass away, but Yahweh's words will never pass away. I have been guided by the Spirit of Yahweh to diligently calculate the Phases of the Moon, New Years, Sabbatical Years, Jubilee Years, Extra Months, Jewish History, Yahweh's Clock, and more, spanning from 4234 BCE to CE 2136. To ensure that you are not misled by a false calendar, it is essential that you visit our website at www.yhwhcalendar49.com to access all the necessary information. As highlighted in 2nd Timothy 2nd chapter 14th to 26th verse, 3rd Chapter 1st to 9th verse, and 1st Timothy 4th Chapter 1st to 2nd verse, it is crucial that you heed my words and avoid falling prey to deceptive calendars.

As per the commands in Leviticus 23rd and 25th chapters, it was the duty of the High Priest to declare the dates of each of Yahweh's Synodic Month, Sabbatical Year, Jubilee Year, Festival, and etcetera well in advance each year. Even today, every chosen servant of Yahweh must declare such dates before they practically occur. It is important to note that in the past, all Israelis were aware of the dates of the Appointed times of Yahweh before they actually occurred each year. It is advisable to refer to Leviticus 23rd chapter (verses 1-44), 25th chapter (verses 1-9), 2 Kings 4th chapter (verse 23), and 1 Samuel 20th chapter (verse 5) for more information. The mystery behind 49 years is the 49-Year Luni Solar Cycle. However, not all Rabbis are aware of this mystery till date, leading to the Jewish nation being misled by them.

It is interesting to note that the Rabbis are counting 49 years to get Sabbatical Years, but they are not doing so in terms of 49 Luni Solar Years, which equals 606 Yahweh's Synodic Months or 588 Yahweh's Tropical Months or 49 Tropical Years or 17,896 days. They are also counting 50 years, but not in terms of 50 Luni Solar Years, which equals 618 Synodic Months or 50 Tropical Years or 18,250 days. It is worth mentioning that Israelis did not celebrate the Appointed times of Yahweh at the right time from CE 135 to CE 2023, although some dates might be true.

According to the 49-year Luni Solar Cycle and 49-year Tropical Cycle, we are currently experiencing accurate nights, daytimes, Seasons, Phases of the Moon, New Years, Extra Months, Sabbatical Years, and Jubilee Years and so on. The discoveries of Astronomers (IAU/NASA), Hindu Calendar and Muslim Calendar is disproved by me because of inaccuracy.

That's why more or less than 86,400 seconds per 360° per 1 day didn't give accurate Phases of the Moon, and Seasons. For the proof, please study under SEARCH AND FIND on our website. This is evidence that Yahweh's Formula is the Universal formula and that Yahweh is in control of the Universe. For more information, please refer to Jeremiah 32nd chapter 26th to 27th verse. It is important to remember that two witnesses are true, as stated in John 8th chapter 17th verse, and Deuteronomy 17th chapter 8th to 13th verse. Keep these truths in mind as we navigate through life. Please study under Jewish History.

I learned that the formula of Yahweh's Calendar and the age of each new Crescent at 6 PM were first explained to Mose on Mount Sinai. It's interesting to note that all the High Priests know this formula. Therefore, they didn't need to watch for the new Crescent during their lifetime. Yahweh never commanded them to observe the Visible Crescent, calculate for the Conjunction, and observe the barley ears whether they are ripened or not. It's fascinating to learn about the history and traditions surrounding the calendar.

The formula of Yahweh's Calendar has been passed down for generations, starting with its first explanation to Mose on Mount Sinai. The High Priests have a deep understanding of Yahweh's Calendar, including the age of each new Crescent at 6 PM. It is important to note that the High Priest did not personally watch for the new Crescent during his lifetime, as the formula allowed for accurate determination of the New Moon date of each Month. Yahweh did not command the calculation for the Conjunction or the observation of ripened barley ears in order to determine the New Year date. Observing the Visible Crescent is crucial to accurately estimate the size and age of the new Crescent and to confirm all our calculations. It is important to note that as the face of the Moon is projected towards the Sun, we are unable to see the face of the visible Crescent as soon as the previous month ends. So, it's essential not to assume that every visible Crescent indicates the beginning of the Month as it might be the second day many times. To prove the age of New Crescent, you should go through pages 195 through 260 in the Jewish History section of our website. These pages provided the necessary information to confirm the age of the New Crescent Month. If you have any further questions or concerns, please don't hesitate to reach out for assistance. Hey, have you ever noticed that sometimes the new Crescent Moon isn't visible even when it should be? It's because the moon is actually revolving in the opposite direction of the Earth. And did you know that the age of the Moon increases as the size of the Crescent Month increases? It's pretty interesting stuff. Also, if there's rain or clouds, the new Crescent might not be visible for a few days.

Hey there! Did you know that there's a chance to see the new Crescent at the start of the month two or three times a year? It all depends on the age of the new Crescent, which can be measured in either hours or days completed. To determine the Phase of the Moon and the age of the new Crescent at 6 PM, it's important to calculate it accurately. Interestingly, countries that are behind Israel often have a clearer view of the new Crescent because the time and Phases of the Moon start first in Jerusalem and the age of the new Crescent varies from longitude to longitude.

It seems that the Priests didn't put much emphasis on observing the ripening of barley to confirm 1st Abib. Additionally, it appears that they may have overlooked the requirement for all Israelis to gather grapes and wheat grains from the fields when celebrating Sukkoth, as written in Deuteronomy 16:13. It's important to follow all the guidelines set forth in religious texts to ensure that traditions are upheld and celebrated properly. So, it's important to observe the Month of Abib by counting the 1st day of Abib according to the 49-year or 49-year Luni Solar Cycle. It's crucial to be aware of this and not follow false Prophets who know nothing about Astronomy and Mathematics. I recommend reading Hosea 4th chapter 1st to 6th verses and 2 Peter 3rd chapter 15th to 17th verses for more insight. It is believed that the Jews lost the formula for Yahweh's Calendar between CE 135 and CE 2023 when they were expelled from Israel. This has made it difficult for them to solve the Luni Solar Calendar puzzle and celebrate the Appointed times of Yahweh. The Calendar has always been a significant challenge for every religion, whether it is a Luni Solar Calendar or a Lunar Calendar. Therefore, it is imperative that the Jews remember and realize that the 49 YEARS is the formula for Yahweh's Calendar.

The CALENDAR is a fascinating puzzle that has been studied and used by various cultures throughout history. Each calendar system has its own unique approach, such as Yahweh's use of the 49-year Luni Solar Cycle, the Hindu's use of the 60-year Luni Solar Cycle, the Gregorian's use of the 400-year Tropical Cycle, and the Muslim's use of the 1-year Lunar Cycle. It's interesting to see how these different methods can help people keep track of time and plan for important events. Despite the differences, all calendars serve the same purpose of helping people organize their lives and stay on schedule.

Please note that when observing the phases of the moon, IAU/NASA did not use the concept of Sidereal Day. It is important to study Astronomy carefully to avoid being misled by false information. These calculations are a part of basic 10th-class Mathematics. According to the Luni Solar Difference Per Month, the Extra Month takes place. This difference is calculated by subtracting Yahweh's Synodic Month from Yahweh's Tropical Month and the result is 0.904021014 days. Once 33 or 32 Synodic Months have passed, the Luni Solar Difference Per Month accumulates to 29.53135314 days and the Extra Month is added. However, it's worth noting that the Extra Month occurring at the end of Adar month may be misleading the Jewish nation to this day.

Yahweh the Creator Created the Universe according to the 7-Day Weekly Cycle. It's interesting to note that Yahweh called the 7th day as the Sabbath day. Additionally, did you know that the 35° East Longitude passes through Jerusalem? This is important because the time and phases of the moon begin from Jerusalem as "II. ST - h m s", where h represents hours, m represents minutes, and s represents seconds. It's also worth mentioning that the Universal Time "UT± h m s" or "UTC ± h m s" is true if the earth is **stopped**. That is why I am telling that astronomers are misleading the World with their inaccurate discoveries.

According to the information provided, the 6258th New Year or 6258th New Civil Luni Solar Year began in Israel during the summer season on September 15th, AD/CE 2023, at precisely 22:02:22.848, with a longitude of 35°E in Jerusalem. Additionally, the 3563rd New Religious Luni Solar Year or 77390THNew Moon will commence on April 9th, AD/CE 2024, at exactly 15 hours, 18 minutes, and 24.9523 seconds, with a longitude of 35°E in Jerusalem. Please note that the Phases of the Moon fed in <https://astropixels.com/ephemeris/phasescat/phasescat.html> are not accurate. On the 3rd of June 1579 BCE, Yahweh introduced the Religious Luni Solar Year in Egypt at exactly 22 hours, 2 minutes, and 53.3952 seconds, on a Friday. This information can be found in Exodus chapter 12, verses 1-2, and for further proof, I recommend studying pages 498 and 506 pages under Yahweh's Clock on www.yhwhcalendar49.com

According to our calculations, we are counting the Civil Luni Solar Years from the date of the Creation of the Sun, Moon, and stars according to Genesis 1st Chapter 14th to 19th verse. Additionally, we are also counting Religious Luni Solar Years from the land of Canaan, strictly from 22 hours, 30 minutes, 53.465184 seconds on 11th June 1539 BCE (Sunday) at 35° E Jerusalem according to Leviticus 25th chapter 1st to 7th verse. This information is important for understanding the timelines and historical events of our world.

I want to share with you an interesting piece of history that took place in 46 BCE. It was when Julius Caesar proposed the tropical calendar and interestingly, flowering occurred in April during the time the Julian calendar was proposed. This is historical evidence that supports this fact. In addition, on the 29th of June in 46 BCE, Ugadi is celebrated according to the Hindu 60-Year Luni Solar Cycle, while on the 9th of July, Ugadi is celebrated according to NASA's 60-Year Luni Solar Cycle. Moreover, Yahweh's Calendar is also proven historically and astronomically, as the Jewish New Year falls on the 22nd of April in 46 BCE according to Yahweh's 49-Year Luni Solar Cycle. You can find scientific evidence on page 997 under CHALLENGE on www.yhwhcalendar49.com. For more information on Ugadi, the Jewish New Year during flowering, and Ugadi according to NASA's 60-Year Luni Solar Cycle, please search and find on our website. So let me explain a little bit about the Hindu calendar.

At the Equator, each Hindu Synodic Month takes 29 days, 12 hours, 44 minutes, and 38.1671159 seconds. This is because Hindu Synodic Month = Days completed per 60 Luni Solar years ÷ Hindu Synodic Months completed per 60 Luni Solar years.

Therefore, Hindu Synodic Month = 21,912 days ÷ 742 Hindu Synodic Months = 29.5309973 days = 29 days, 12 hours, 44 minutes, and 38.1671159 seconds. It's interesting to note that this is a constant forever, according to the Creator Brahma. At the Equator, each Hindu Tropical Year takes 365.2 days because it is calculated as the days completed per 60 Tropical years divided by 60 Hindu Tropical years. So Hindu Tropical Year = 21,912 days ÷ 60 Years = 365.2 days = 365 days, 4 hours, and 48 minutes, which is constant forever according to the Creator Brahma. Please note that Hindu Tropical Year (365.2 days) is not suitable to get accurate Seasons. So Hindu Calendar is not determined by Brahma. For the details, please study on our website. **That is why** I am telling that Hindu astronomers or Panchang writers are misleading Hindus approximately from 1500 BCE.

It's important to be thorough and thoughtful when verifying historical events. Relying on just one source, especially scientific discoveries, may not always lead to accurate conclusions. A better approach is to cross-reference multiple sources and methods. One example of this is studying the Phases of the Moon and seasons. By examining Yahweh's Book, we can gain a deeper understanding of these natural cycles and appreciate the complexity of the universe. Using Yahweh's principles and formula can help us achieve a more comprehensive perspective. It's important to keep an open mind and consider all available information when seeking the truth about historical events.

(1). As you may know, the Sidereal Day lasts 23 hours, 56 minutes, and 4.09 seconds. However, this information is not particularly helpful when it comes to determining things like the length of nights and daytimes, the phases of the moon, or the changing of the seasons. That's why the IAU and NASA don't use this notion in their calculations. But if we can't rely on the Sidereal Day, how can we trust that the Synodic Month lasts 29.53058885 days and the Tropical Year lasts 365.2421897 days? I have actually disproved these discoveries, even those made by Hindu Astronomers. (2). Did you know that a day is equal to 86,400 seconds and consists of one night and one daytime? This is a measurement used by IAU and NASA when calculating the phases of the moon from 2000 BCE to CE 4000. See

<http://astropixels.com/ephemeris/phasescat/phasescat.html>. (3). Synodic Month = 29.53058885 days. This Synodic Month is not giving accurate Seasons because there is no accurate Tropical Cycle and Luni Solar Cycle such as the 19 – Year Tropical Cycle = 19 – Year Luni Solar Cycle, 60 – Year Tropical Cycle = 60 – Year Luni Solar Cycle and so on. So this Synodic Month is not useful to verify Historical events written either in The Book of Yahweh or in the Vedas or in the Quran because Phases of the Moon, and Seasons didn't occur between 4000 BCE and CE 4000. For proof, please find the data on our website.(4). Tropical Year = 365.24219 days or 365.2421897 days. This Tropical Year is not giving accurate Seasons because there is no accurate Tropical Cycle and Luni Solar Cycle such as the 19 – Year Tropical Cycle = 19 – Year Luni Solar Cycle, 60 – Year Tropical Cycle = 60 – Year Luni Solar Cycle and so on. For proof, please dig from our website. **That is why** I am telling that astronomers of International Astronomical Union are misleading the World.

I have recently learned about an interesting observation concerning the relationship between the Earth, the Sun, and the Moon. Apparently, this relationship is said to be 49 years, according to the formula of Yahweh's Calendar. This formula is believed to prove that the actual Creator is Yahweh, and that Yahweh's Word is constant forever (Matthews 24:34-35). If you have any questions about Yahweh's Calendar, please feel free to contact me. My phone number is +91 9704424254, and my website is www.yhwhcalendar49.com.

Thank you for taking the time to read this message. Yahweh bless you!

Shalom
